Accreditation and Usage Notice

This software and codebase, developed by the UNDP Sudan Acc Lab Exploration Team and the UNDP Accelerator Lab, is provided as a digital public good to support open access innovation and foster participation in deep technology development. The underlying Automated Horizon Scanning methodology is recognized as the intellectual property of Wigdan Seedahmed, established in 2018, and is protected under applicable intellectual property laws. This methodology forms the foundational framework for the localized code and its associated prototypes: the Egypt Horizon Scanner (EHS) and the Sudan Horizon Scanner (SHS), both of which are also acknowledged as digital public goods.

Users are encouraged to adapt and build upon this code for various purposes, including commercial use, but must provide appropriate credit to the original creators. Modifications are required for any deployment, with at least 25% of the source code being altered to ensure meaningful contributions and innovation.

By utilizing this code, you contribute to the ecosystem of technological advancement and support innovation that benefits small and medium enterprises (SMEs), governance frameworks, and open-access solutions.
